**130** talents in our team

**5** countries

We are implementing our IT solutions in those countries: Ukraine 🇺🇦, Belgium 🇧🇪, Finland 🇫🇮, Germany 🇩🇪, Côte d'Ivoire 🇨🇮

# U.S. wants to export Ukraine's e-governance app to other countries

## Samantha Power

Administrator of the United States Agency for International Development

**Samantha Power** ✔
@PowerUSAID

Millions in Ukraine use Diia, an app that provides access to over 100 government services. It's a shining example of Ukrainian ingenuity, and we're partnering with Ukraine on helping countries build apps like it that connect citizens with their government.
axios.com
U.S. wants to help export Ukraine's e-governance app to other countries
Samantha Power will discuss the plan at Davos.

12:25 AM · Jan 19, 2023 · **527.4K** Views

"We could learn from the Ukrainians. We need to get the Diia producer to bid for government contracts"

**Bob Seely**
Member of the UK Parliament

"Diia: Ukraine implements world leading digital government. What can we in Canada learn from Ukraine?"

**Colin Deacon**
Senate of Canada

# Top 3 problem in GovTech

## Most of the public services are not digitized

**The government** employs numerous officers who manage inefficient paperwork leading to slow bureaucratic processes.

**Residents** queueing instead of devoting time to themselves, their family or business.

## Available systems are disconnected and do not interact

**The government** doesn't not have a complete data about interests and residents behavior for decision-making.

**Residents** provide personal data which the government already has. disconnected services makes it hard to navigate

## Separate development is too expensive and long

**The government** has limited time and budget to launch or market new services.

**Taxpayers'** money can be appropriated more sensibly with a bigger impact.

# Ukraine Government on the App with 21M users

- ✔ Simple access to the most popular online public services
- ✔ Digital documents with verified data sharing
- ✔ Integrated cloud-based digital signature
